CRESTRON®

RELEASE NOTES

Panopto

1.00.001.0002

Product or Content Description

Crestron, in sync with Panopto seamlessly connects your in-room AV technology to your recording service. The integration with Panopto allows you to control a Panopto remote recorder from a touchscreen, PC/MAC, IPad or a remote web interface.

Notes and Recommendations

Must place the Panopto.dll in the USER directory of the Crestron Processor prior to loading the program. This library assembly will be loaded when the program initializes.

You must have the Panopto remote recorder installed on a local Laptop/PC and this recorder must be registered with the Panopto service. When logging in from the Crestron system, you will need to have proper credentials as well as the proper name for the remote recorder that you will use.

Currently there is a known issue with connection failure when more than 25 remote recorders present on the network.

System Requirements and Dependencies
