REVISION HISTORY:

- v1.0 – Initial Release
- v1.1 – Fixed SerialPort transmitted and received data.
 - Made updates to allow a Wallplate Encoder to initialize with this suite.
- v1.2 – Isolated serial communication queue to provide device control responsiveness.
 - Corrected unsolicited data parsing impacting hotplug detected and resolution.
- v2.0 – Added “Offline” functionality.
 - Polling will happen more frequently but will only poll for one component's states at a time. This prevents serial control from getting backed up behind a global system poll.
- v2.1 – Added volume support for applicable 10G decoders.
 - Added support for 10G videowall support with “10G VW Layout”
- v2.2 - Change 1G video wall input select to new faster API command
- v2.3 – Added CEC support for Encoders.
- v2.4 – Added Matrix PresetRecall and Matrix Macro module.
- V2.5 – Added video urls to encoder module.
- v2.6 – Reconnect time increased from 30 seconds to 90 seconds.
