

**SIMPLWINDOWS NAME:** Gentner (Multiple Units) Gating Controls

**CATEGORY:** Conferencing

**VERSION:** 1.0

**SUMMARY:** Allows selection of a gating group and adjustment of settings within the group

**GENERAL NOTES:** The commands used for the XAP800/XAP400/PSR1212 mixer are similar to the commands used for the Gentner AP800/AP400. Therefore the same modules developed for the XAP800/XAP400/PSR1212 may work on other (past and future) Gentner products. To allow for this flexibility of use, you must specify which Gentner model is being controlled using the TYPE-ID-ASCII parameter field. Currently valid entries are a single digit from 1 to 7 with no suffix as shown below:

- For XAP400, use 7
- For XAP800, use 5
- For PSR1212, use 4
- For AP400, use 3
- For AP10, use 2
- For AP800, use 1

Multiple devices can be connected to the Gentner bus and controlled from a single RS232 port. Therefore, it is also necessary to enter the Unit ID of the device being controlled. This should be entered in the UNIT-ID-ASCII parameter field as a single digit number from 0-8 with no suffix.

This module allows any of gating groups 1-4 and A-D to be selected, and the following parameters to be adjusted for each

1. First Mic Priority
2. Maximum Number of Mics
3. Last Mic On

In addition, this module allows you to request the current gate status, to allow you to detect which mics are currently gated on. The current gating status is requested by pulsing the REQ-GATE-STATUS input. When a new Gating Group is selected using the GROUP-\* inputs, the current settings will be automatically requested for that group, and updated on the outputs of the module.
