

Manufacturer: Bose
Model: EX Series
Device Type: Digital Signal Processor

GENERAL INFORMATION

SIMPLWINDOWS NAME:	Bose EX Series State Control v3.2
CATEGORY:	Conferencing
VERSION:	3.2
SUMMARY:	The State Control component controls the state of a specified attribute in the Bose EX-1280C design. This includes mute states and logic states.
GENERAL NOTES:	IMPORTANT: While this module suite supports the majority of the Bose EX Series family, there may be certain modules or module attributes that are not supported by certain devices. Please refer to the Bose ControlSpace Serial Control Protocol v5.10 documentation for more information regarding which controls are supported for the device you are using.
CRESTRON HARDWARE REQUIRED:	Crestron 3-Series or 4-Series processor.
VENDOR FIRMWARE:	v2.520

Manufacturer: Bose
Model: EX Series
Device Type: Digital Signal Processor

PARAMETERS:

Module_Name	Set to the name of the module to be controlled.
Module Type	A list for the user to select which type of module is being controlled. Selections include: Input Mute, Output Mute, Gain Module Mute, Standard Mixer Input Mute, Standard Mixer Output Mute, PSTN Input Mute, PSTN Output Mute, VoIP Input Mute, VoIP Output Mute, USB Input Mute, USB Output Mute, AMM Input Mute, AMM Output Mute, Logic Input, and Logic Output.
Module_Channel	Set to the channel of the module that the component will control. If there is only one channel to be controlled, it should be set to 1d.
Command_Processor_ID	The unique identifier for the command processor module this module will register with.

Manufacturer: Bose
Model: EX Series
Device Type: Digital Signal Processor

**CONTROL:**

State_On	D	Pulse to turn on the state of the controlled attribute.
State_Off	D	Pulse to turn off the state of the controlled attribute.
State_Toggle	D	Pulse to toggle the state of the controlled attribute.
State_Pulse	D	Pulse to send a pulse to a Logic Input or Logic Output. Module_Type parameter must be set to Logic Input or Logic Output for this control to function.
Enable	D	Latch high to enable this component.

Manufacturer: Bose
Model: EX Series
Device Type: Digital Signal Processor

FEEDBACK:

Is_Initialized	D	Indicates the module is registered to the command processor and is synchronized with current device state when the signal is high, or not synchronized with current device state when the signal is low.
State_Is_On	D	Indicates that the current state of the controlled attribute is on.
State_Is_Off	D	Indicates that the current state of the controlled attribute is off.
Is_Quarantined	D	Indicates that there was a problem getting this component initialized due to a configuration issue when the signal is high, or that no initialization issue occurred when the signal is low. A quarantined component will not prevent the command processor or other components from getting initialized.

Manufacturer: Bose
Model: EX Series
Device Type: Digital Signal Processor

**TESTING:**

OPS USED FOR TESTING: CP3 1.8001.4666.20418
MC4 2.8000.00017

SIMPL WINDOWS USED FOR TESTING: 4.2000.00

CRES DB USED FOR TESTING: 216.0500.002.00

DEVICE DATABASE: 200.24500.001.00

SYMBOL LIBRARY USED FOR TESTING: 1180

SAMPLE PROGRAM: Bose EX Series v3.2 IP Demo.smw
Bose EX Series v3.2 RS232 Demo.smw

REVISION HISTORY: v3.0 – Initial Release
v3.1 – Fixed bug with multiple modules controlling level and mute attributes of multiple ControlSpace blocks.
v3.2 – No updates have been performed.
