

Certified Module

Partner: Denon Model: DVD-2500BT + DVD-3800BDCi Device Type: DVD Player

GENERAL INFORMATION				
SIMPLWINDOWS NAME:	Denon DVD-2500BT + DVD-3800BDCi v1.1			
CATEGORY:	Transport Decks			
VERSION:	1.1			
SUMMARY:	Controls all standard functions and provides true feedback			
GENERAL NOTES:	This module will control the DVD-2500BT + 3800BDCi Players. It should also control a DVD-2500BT player; however, it was tested at Crestron using only a DVD-3800BDCi. Note that the unit does not respond to any commands for at least 20 seconds while powering up from standby. Auto status mode is automatically set at startup. A response is waited for after sending each command. If a response is not received within one second after sending a command, the Please_Wait output will go high. This module will continue to wait for a response for up to twelve seconds. After twelve seconds, the module will time out and allow another command to be sent. This was done to avoid overloading the DVD player with too many commands. Commands are generally responded to instantly, and the Please_Wait output will usually only go high if multiple commands are being sent in rapid succession. Note that this module indicates the language of the audio and subtitles currently active with serial outputs. Note that all inputs to this module should be momentary, as if coming from a button on a touch panel.			
CRESTRON HARDWARE REQUIRED:	CNX-COM, CNX-COM2, C2-COM, C2-COM2, C2-COM3, ST-COM			
SETUP OF CRESTRON HARDWARE:	RS232 Baud: 9600 Parity: N Data Bits: 8 Stop Bits: 1			
VENDOR FIRMWARE:	None			
VENDOR SETUP:	None			
CABLE DIAGRAM:	CNSP-121
