

Product description:

By using this Ekey Driver Demo module, it is possible to implement biometric solutions into individual applications by communication over RS485/RS232 to ekey module.

The initial baud rate is 115200 baud, 8bits, no parity, 1 stop bit,

If the module doesn't get an inquiry within 2.5 sec, the module will go offline. This means: the orange LED is blinking, and the module will send each positive match alone.

Normal enrollment: criteria of the fingerprint are checked. If they are good, the template will be stored

The finger template is stored in the finger scanner's flash.

Not all finger scanners have the same LED colours. Please look at the datasheets

LED flashes orange during enrollment.
