

Partner: Wavetrend
Model: L-RX201
Device Type: RF Tag Reader

**GENERAL INFORMATION**

SIMPLWINDOWS NAME:	Wavetrend L-RX201 v1.0
CATEGORY:	Miscellaneous
VERSION:	1.0
SUMMARY:	Communicates with the Wavetrend L-RX201 Reader via RS-232 and reports the status of up to 30 RF tags.
GENERAL NOTES:	<p>Controls functions of the Wavetrend L-RX201 Reader via RS-232 and reports the status of up to 30 RF tags.</p> <p>The reader needs to be set to 9600 baud in order to work consistently. This is done using Wavetrend software.</p> <p>This module was tested with (2) L-RX201's and a Wavetrend PS300 power supply. Serial control requires that the Crestron com port be connected to the PS300's NET IN port via a CNSP-655 cable, then from the PS300's NET OUT port of the to the left ('IN') port of the L-RX201 via a straight through RJ45 cable using ONLY pins 1,2,3,4.</p> <p>When connecting readers as a network only 4 wires (pins 3,4,5,6) must be used straight through using an 8-pin RJ45 connector from the right ('OUT') port of one L-RX201 to the left ('IN') port of the next L-RX201.</p> <p>Manufacturer suggests that no more that 7 readers be chained together.</p> <p>The reader can be ID'd by either the Receiver_ID or Node_ID. If one is being used, the other needs to be set to zero (ex. Receiver_ID = 2, Node_ID = 0)</p>
CRESTRON HARDWARE REQUIRED:	2-Series processor, C2I-COM, ST-COM or C2-COM-*
SETUP OF CRESTRON HARDWARE:	RS232 Baud: 9600 Parity: N Data Bits: 8 Stop Bits: 1
VENDOR FIRMWARE:	N/A
VENDOR SETUP:	Tag readers need to be set to 9600 baud.
CABLE DIAGRAM:	CNSP-655

Partner: Wavetrend
 Model: L-RX201
 Device Type: RF Tag Reader

Rear View of Connector

9 Pin Female

CNSP-655

CONTROL:

Set_Site_Code	D	Pulse to enable the reader to monitor tags that are part of the site being monitored. Site code is entered in parameter.
From_Processor\$	S	Serial information received from the Wavetrend L-RX201 Main Feedback Processor v1.0 module.

FEEDBACK:

Tag_ID_*_In_Range_Fb	S	Displays the tag ID's being used.
Tag_ID_*_Motion_Alarm_Fb	D	This is used to cause the TCP/IP client to connect to the device.
Tag_ID_*_Reed_Alarm_Fb	D	Connected feedback. This signal is passed through the module in case some one wants to use for something.
Tag_ID_*\$	S	Serial string to indicate the tag number.
To_Device\$	S	Serial commands routed to a 2-way serial port on device.

Partner: Wavetrend
Model: L-RX201
Device Type: RF Tag Reader

**PARAMETERS:**

Site_Code	S	Site code that the reader will be assigned. The reader will filter out any tags that it receives that do not correspond to the stored site code value entered here. A setting of 0 will enable the reader to read all tags.
Interval	A	The amount of time to hold a tag's In_Range_Fb status before timing out. Recommended value is 5 to 10 minutes.
Receiver_ID	A	Receiver ID of the reader that is being polled. If this is selected, the Node_ID MUST be zero.
Node_ID	A	Node ID of the reader that is being polled. If this is selected, the Receiver_ID MUST be zero.
Tag_ID_*	S	Enter the ID's of the tags to be read. The tag ID's entered here will correspond with the In_Range, In_Motion_Alarm, and Reed_Alarm feedback signals.

TESTING:

OPS USED FOR TESTING:	3.155_1240
SIMPL WINDOWS USED FOR TESTING:	2.08.44
CRES DB USED FOR TESTING:	18.9.1
SYMBOL LIBRARY USED FOR TESTING:	497
SAMPLE PROGRAM:	Wavetrend L-RX201 v1.0 Demo PRO2
REVISION HISTORY:	v1.0
