GENERAL INFORMATION

SIMPLWINDOWS NAME:	WWP Panel Airco v1.0
CATEGORY:	User Interface
VERSION:	1.0
SUMMARY:	Air-conditioning of the routed room and the airco tiles in the climate overview for one touch panel (contract smart objects Airco and AircoOverview).
GENERAL NOTES:	One instance per touch panel. All WWP Panel modules of one panel share the same Panel_Number; the room that panel is routed to (WWP Panel Rooms) decides what this module shows. Signal names follow the WWP Panel UI contract (CH5), so the module can be wired straight to the panel smart object. Smart object on the WWP Panel UI: Airco + AircoOverview. Requirements: WWP Core (once per program) and the SIMPL# library WwpConfig.clz in the same folder as the program. All WWP modules communicate with each other inside the processor; no extra wiring between modules is needed. Start-up: the module does not send any commands to devices at boot. After the configuration is loaded it only publishes the current state (names, visibility, feedback) so panels and logic are correct straight away. Licensing: part of the commercial WWP Home Config package (licenses S / M / L, 7-day trial per processor). See "WWP Home Config v1.0 Help.pdf" for the complete system description.
CRESTRON HARDWARE REQUIRED:	4-Series control system (developed and tested on RMC4). 3-Series is not
